For example, there are methods for improving the static and dynamic properties of plastics material by adding certain additives thereto, generally finely divided. The additive is generally present in the moulded plastics material in an amount in the range 1 to 5% by weight with respect to the total weight of the material. The additives are generally inorganic compounds, in particular metal oxides. In particular, use is generally made of additives in the form of fine powders or as finely ground fillers, such as aluminium oxide, titanium oxide and mixtures of these, barium sulphate, calcium carbonate, calcium sulphate, magnesium sulphate, magnesium carbonate, zinc oxide, talcum, magnesium stearate, barium stearate, diatomaceous earth, calcium stearate, zinc stearate, barium stearate, calcium stearate, zinc stearate, talcum, calcium carbonate and magnesium carbonate, and mixtures of these.
