I would like to bundle this app into a.ipa and ship it to Apple so that it can be installed on the user's phone. Is there any way

to do this? The app is still XCode 4.4 based. I am pretty sure I know how to make an IPA with the new XCode 5 but I can't find any docs that address the XCode 4.4 app. A: You need to deploy it using the MobileFoundation framework. There is a good reference here.

There is also a good article here, and a handy pdf here. 1. Field of the Invention The present invention relates to the field of polymer composite materials and methods for producing such composite materials. More specifically, the present invention relates to the field of polymer nanocomposite materials and methods for producing such material. 2. Background Art The use of plastic materials has dramatically increased in recent years. Use of plastic materials, such as polyvinyl chloride, polyvinylidene chloride, polyethylene, polypropylene, polystyrene, polycarbonates, epoxies and the like has significantly increased and is growing rapidly. Thermoplastic composites comprise a plastic matrix material reinforced with a plastic filler material, often in the form of small particles. Thermoplastic composites allow the production of relatively lightweight parts. Because of this, thermoplastic composites have found increasing applications in areas such as automotive, marine, and aeronautical vehicle manufacturing. With increased use of thermoplastic composites, the need to develop improved methods for producing these materials has also increased. For example, improved methods for producing thermoplastic composites that can have good mechanical strength and impact resistance at relatively low weight are needed. Many thermoplastic composite materials use a thermoset matrix and, prior to curing, contain finely divided particles, e.g., ranging from 0.1 microns to 2 microns, of filler material. Thus, the matrix, or glue, for a composite is produced by polymerization of a thermos
